

Example:  
 $(3 \times 8) - 1$

# NUMBER KNOCKOUT

Make an equation that equals 23. Add, subtract, multiply, or divide.  
Use numbers that are next to each other on the grid. Each number square can only be used once in each equation—no doubling back.

6	5	1	8	2
3	4	1	7	3
2	3	4	8	6
8	6	4	3	1
1	3	3	7	3
